

Oasis Infobyte – Cybersecurity Internship

Task 1 – Basic Network Scanning with Nmap

This document explains the practical work completed for Task 1 of the Oasis Infobyte Cybersecurity Internship. The task involved performing a basic Nmap TCP port scan on an authorized host and documenting the results.

Objective

The objective was to use Nmap to identify reachable TCP ports on the authorized target and record the services associated with the ports that were reported as open.

Scan Result

Port	State	Service
135/tcp	open	msrpc
139/tcp	open	netbios-ssn
445/tcp	open	microsoft-ds
1521/tcp	open	oracle
5500/tcp	open	hotline

Evidence Included

The repository contains the saved Nmap scan output as a text file and a screenshot showing the practical scan result. The scan report PDF documents the activity and observed results.

Files

File	Purpose
Task_1_Nmap_Human_Report.pdf	Detailed Task 1 report
scan_result.txt	Saved Nmap scan output
20260812_184112.jpg	Screenshot evidence of the scan
Task-1-Nmap-README.pdf	Summary and description of Task 1

Purpose

This task was completed for educational and internship purposes. The Nmap activity was performed on an authorized host/network.
